

CS 465

Full Stack Development I

Southern
New Hampshire
University

Course Description

Students will design and develop a full stack application through the utilization of programming language frameworks. In creating a full stack application, students will also be responsible for developing a database as well as the code that interfaces their application to the database. This is the first course in a two-course sequence.

Competency Projects

The course goals are communicated through three competency statements instead of through course outcomes. Competencies represent the knowledge and skills relevant to your field. There is one project in this course that is aligned to all three competencies.

Project (Module Seven submission)

Produce a fully functional travel web application for your client, Travlr Getaways, that meets software requirements. Present your work by explaining your approach as you build each component of the site in a Software Design Document.

In this project, you will demonstrate your mastery of the following competencies:

- Design the architecture of a web application
- Build a web application using frameworks
- Develop and integrate a database using frameworks
